Total Eclipse April 8, 2024 Solar Event over the Hill Country

<https://eclipse.aas.org/eclipse-america-2023-2024>

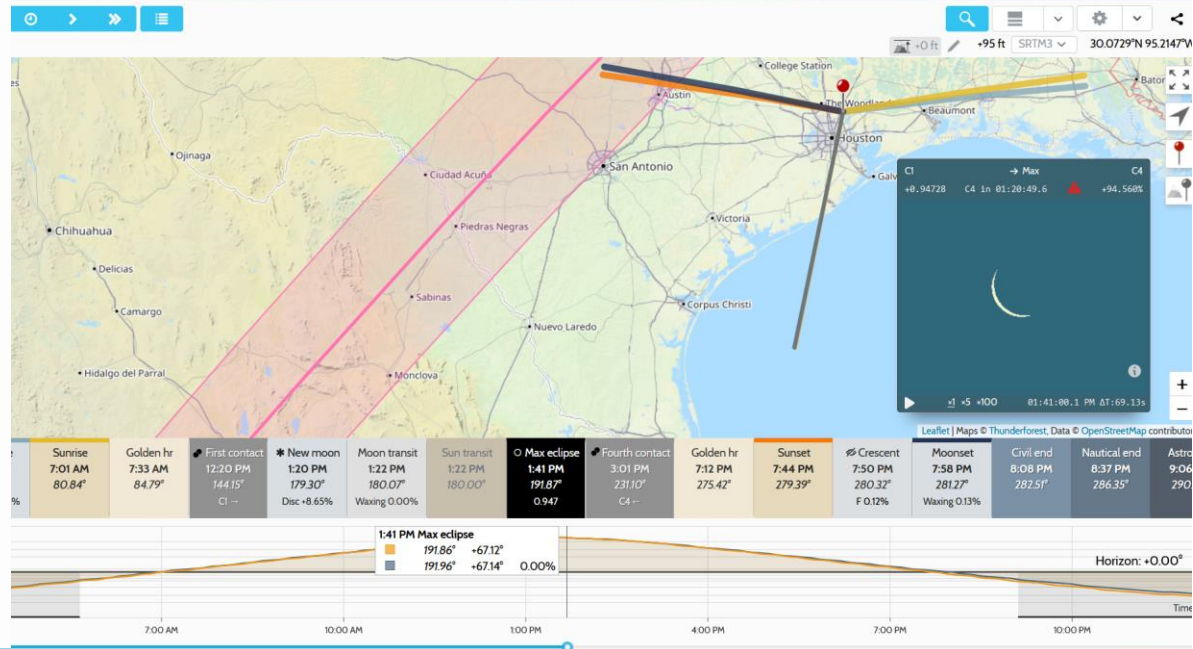

Monday April 8, 2024 – Total Solar Eclipse
 Texas Hill Country to be in the path of totality

Eclipse America 2023-2024

North America will soon be treated to two major solar eclipses, when the Sun, Moon, and Earth align. On October 14, 2023, anyone under clear skies within a path that sweeps from Oregon to Texas and then through parts of Central and South America will see an annular ("ring") eclipse. Just six months later, on April 8, 2024, a total solar eclipse will sweep from Mexico to Texas to the Canadian Maritimes, plunging day into night and revealing the magnificent solar corona for anyone fortunate to be within the path of totality and under clear skies. Nearly everyone in North America will have a partial solar eclipse both days, weather permitting. Map courtesy Michael Zeiler, GreatAmericanEclipse.com.
